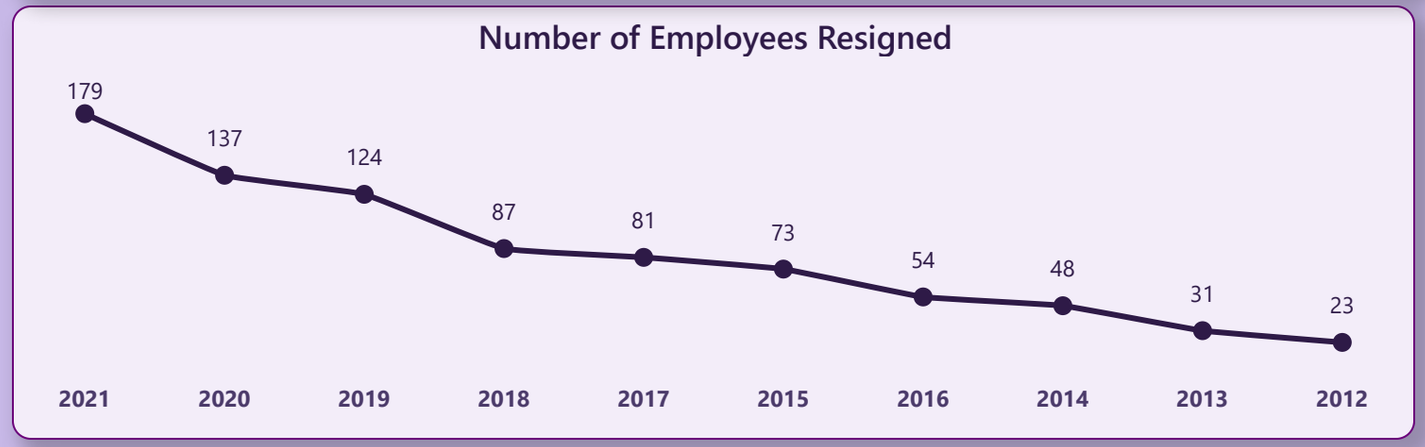
5K	4K	837	82.67	17.33
Total Employees	Active Employees	Resigned Employees	Retention Rate %	Attrition Rate %



Insights:

1. The attrition rate stands at 17.33%, while the employee retention rate is 82.67%, indicating relatively stable workforce retention.

2. Hiring activity shows a noticeable decline around 2014, followed by a gradual recovery until 2018. After 2019, hiring again shows a downward trend, which may be influenced by global uncertainties and organizational restructuring.

3. Employee resignations have increased significantly after 2019, suggesting higher workforce movement. This period also aligns with increased job market flexibility, remote work opportunities, and post-pandemic career shifts.

Strategies:

1. Hiring should be aligned with business demand and workforce planning. Competitive compensation packages can help attract and retain skilled employees during high-requirement periods.

2. To reduce voluntary attrition, organizations should focus on timely performance reviews, career growth opportunities, employee engagement initiatives, and flexible work policies.

HR Employee Attrition

This HR analytics dashboard focuses on understanding employee attrition trends and identifying critical areas affecting workforce stability.

The below reports help to analyze the reasons behind the attrition and also provides strategies on increasing the retention of employees :

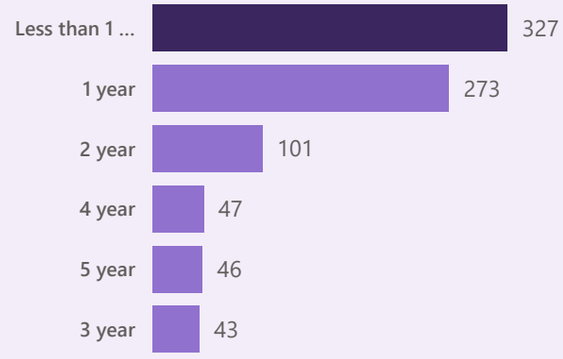
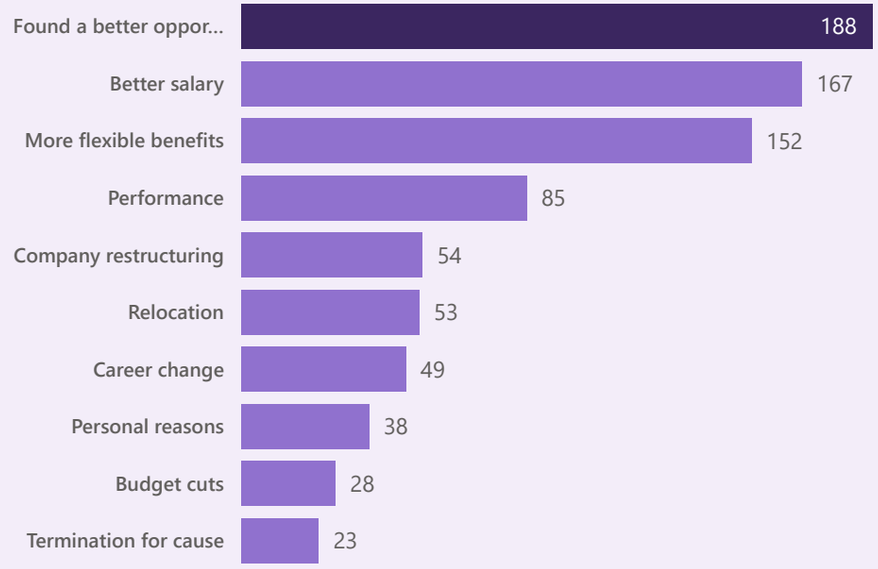
Attrition by Tenure in Company



Reason for Attrition



Insights:

1.Majority of employee exits were voluntary, indicating employees chose to leave rather than being terminated.

2.The majority of the employees who left had worked in the company for less than 1 year.

3.The major reasons for attrition are better job opportunities, more flexible benefits and better salary. Very few people left due to budget cuts.

Strategies:

1.Find reasons for voluntary attrition and work on it. This will increase the retention rate and thus, reduce the attrition rate.

2.Review policies meant for the newbies. Conduct regular reviews and take feedbacks to improve their retention.

3.Provide competitive benefits and salary hikes in order to reduce attrition.

4.Ensure balanced budgeting and workforce planning to minimize involuntary exits during financial constraints.

837
Resigned Employees

Insights:

1.Out of 837 employees who quit, 815 of them were full time employees.

2.Individual contributors have maximum attrition rate. Higher attrition among individual contributors suggests compensation and growth opportunities may be key factors.

3.Software and Sales department have the most attrition followed by Marketing and Finance.

Strategies:

1.Provide salary hikes and additional benefits to full to full employees in order to increase retention.

2.Find out why individual contributors tend to leave more compared to other job levels by conducting frequent review sessions.

3.Salary hikes for those earning below average will improve retention. If hikes are not possible, some sort of benefits need to be given. This must be at par with the competitive industries.

San Jose	39
Dallas	38
Houston	38
Austin	35
Charlotte	35
Phoenix	34
Washington DC	34
San Francisco	29
Indianapolis	28
Denver	27

Insights:

1. Out of 851 employees who quit, around 83% of them were working remotely and 18% of them worked on-site. A large proportion of attrition occurred among remote employees, indicating the need to evaluate workload, engagement and work-life balance in remote work environments.

2. Highly populated and developed cities like San Francisco and Los Angeles show higher attrition due to intense job competition, abundant career opportunities and frequent job-switching. In contrast, cities like Denver and Jacksonville report lower attrition, indicating relatively stable employment environments.

Strategies:

1. When employees are made to work remotely, make sure to provide them a balance between work and life. Employees should not be made to work long hours. They should be treated like those working on-site. Also, providing benefits like reimbursement of internet charges can improve retention.

2. Competitive pay should be provided to those living in the metro cities. The salary should be according to the city standards so that employees need not look out for better salary options.

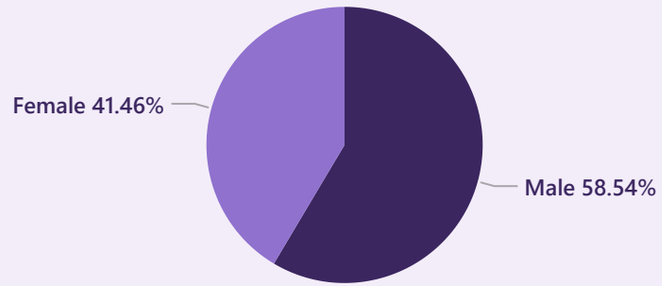
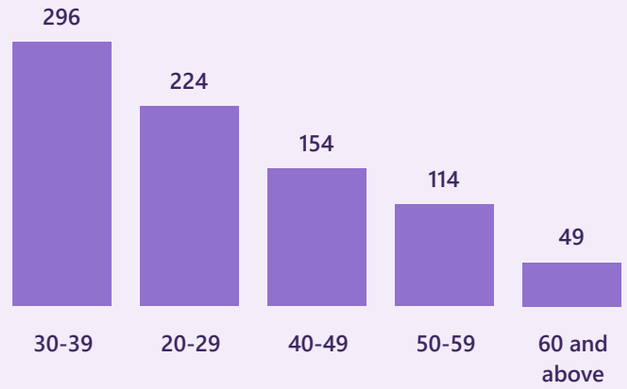
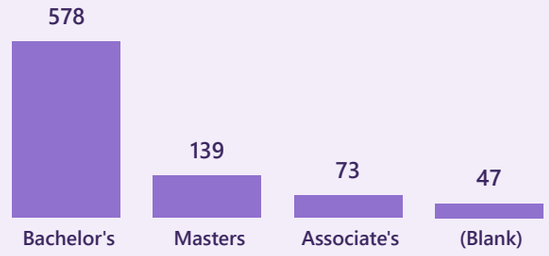
Attrition by Gender



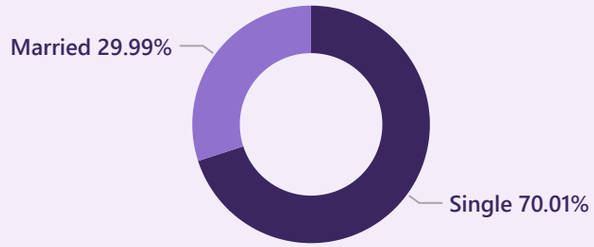
Attrition by Age Group



Attrition by Education

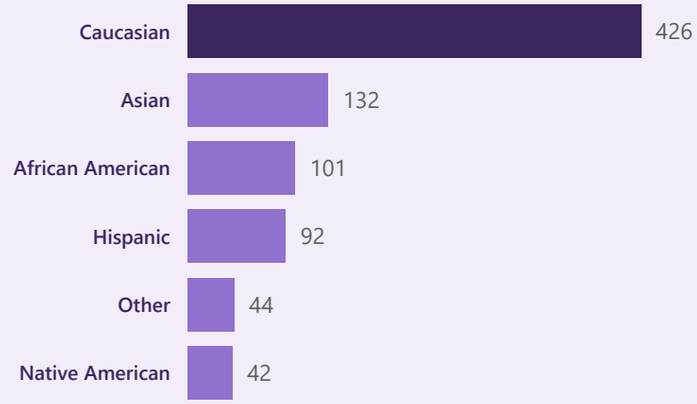


Attrition by Marital Status



Attrition by Sexual Orientation

Attrition by Race



Insights:

1. Around 60% of the employees who quit are Males.

2. Most attrition has occurred in the age group between 30 to 39.

3. Employees with only Bachelor's degree show higher attrition, possibly due to better opportunities available in competitive markets.

4. Single employees quit more than the married ones. The reason might be that married employees stay for stability.

5. Higher attrition among certain racial groups highlights the need for deeper diversity and inclusion analysis.
